Canada

Full list of author information is  
available at the end of the article

## 1 Introduction

The bibliography ( `report.bib` ) must respect [BibTeX](#) format. You can cite entries in your bibliography using their tags:

- Cite an article: [1]
- Cite a GitHub repository: [2]

You can use `inline code highlight`. This paragraph shows how to add blank lines and how to start a paragraph without indentation.

## 2 Section

You can create additional sections as you prefer. Section title levels are determined by the number of hastags as in a traditional markdown file.

### 2.1 Subsection

Subsection content goes here. You can create numerated lists:

- 1 The labels consists of sequential numbers.
- 2 The numbers starts at 1 with every call to the `enumerate` environment.

#### 2.1.1 SubSubsection

You can add mathematical formulas. Single dollars (\$) are required for inline mathematics e.g.  $f(x) = e^{\pi/x}$ .

You can also use plain  $\text{\LaTeX}$ for equations:

$$\hat{f}(\omega) = \int_{-\infty}^{\infty} f(x)e^{i\omega x} dx \quad (1)$$

and refer to [Equation 1](#) from text.

**Figure 1** Your caption goes here.

3 Results

Figure files must be placed at the `figures` folder. You can include figures using the following block:

To refer a figure in the text, you need to use the respective label defined in its caption: Fig. 1

**Availability of Supporting Data**  
More information about this project can be found at: [http://github.com/repo\\_owner/repo\\_name](http://github.com/repo_owner/repo_name).

**Competing interests**  
Please add if there are competing interests. Otherwise, type None.

**Author’s contributions**  
JD and JJD wrote the software, JD performed tests, and JD and JJD wrote the report.

**Acknowledgements**  
The authors would like to thank the organizers and attendees of OHBM Brainhack 2020.
